

Reddit quiz/maze game - Utilize the reddit api to obtain statistics on subreddits to create questions that a player would answer. Players would have the option to pick whichever subreddit. These questions would be put in a sort of maze as blockers where the player would have to answer said question to advance. The maze would be updated via javascript and we would have save states for the game utilizing a database. This would entail accounts for the saving but you'd be able to play anonymously as well. Also alternatively there could be a sort of web like display for different linkages between subreddits. This could be incorporated into a game where you try to get from one subreddit to another via the shortest amount of redirects possible.

Task Assignments

Peter -
Project Manager
Most likely Backend
Ahnaf -
Probably Javascript/frontend
Shafali -
Probably frontend
Daniel -
Probably in a flex role

Specific Tasks

TBD - will determine at later date at which point this will be updated

Some documentation on reddit data collection
